6. Evaluation:

Regularity test(s)

- A closed circuit is used in accordance with the AMF regulations
- The specified time given by the organizers should be repeated as closely as possible
- Deviation from the target time for the special tests will be counted as follows:
 - for each second 100 points
 - for each 1/10 second 10 points
 - for each 1/100 second 1 point

In addition a multiplication coefficient will be used to take into account the year of construction:

The accumulated penalty points of each team are converted using the “**Nuvolari-coefficient**”.

The calculation of this coefficient is based on the following formula:

$$1 + (\text{year of construction of the car} / 100)$$

The sum of all penalty points of each team is multiplied by the coefficient assigned to the car.

1st example

- Year of construction: 1927
- Coefficient of the car: $(1 + 27/100) = 1.27$
- Hypothetical penalty points: 500
- Final points: $500 \times 1.27 = 635$

2nd example

- Year of construction: 1969
- Coefficient of the car: $(1 + 69/100) = 1.69$
- Hypothetical penalty points: 500
- Final points: $500 \times 1.69 = 845$

Starting from year of construction 1971 (class G) the “Nuvolari coefficient” is limited to the value 1,7.

Evaluation

- in 5 classes
- The crews with the lowest final points resulting from the time difference x „Nuvolari coefficients“. will be the winners.
- Classes A to H are included into the overall ranking
